

Principles

Implementation at Scale

Strategies are delivered at a scale that impacts the health and wellbeing of large number of the population in the places where they spend their time – in schools, workplaces and communities.

Collaboration for Collective Impact

Long term commitment is required by multiple partners, from different sectors, at multiple levels, to generate greater collective impact on the health of all New Zealanders. Knowledge is co-created and interventions co-produced, supported by a shared measurements system, mutually reinforcing activities, ongoing communication and a “backbone” support organisation.

Equity

Health equity is the attainment of the highest level of health for all people. Healthy Families New Zealand will have an explicit focus on improving Māori Health and reducing inequalities for groups at increased risk of chronic diseases. Māori participation at all levels of the planning implementation of Healthy Families New Zealand community is critical.

Adaptation

Strengthening the prevention system requires constant reflection, learning and adaption to ensure strategies are timely, relevant and sustainable.

Experimentation

Small scale experiments provide insight into the most effective interventions to address chronic disease. These experiments are underpinned by evidence and experience, monitored and designed to be amplified across the system if they prove effective.

Leadership

Leadership is supported at all levels of the prevention effort including senior managers, elected officials, and health champions in our schools, businesses, workplaces, sporting clubs and other settings in the community.

Line of Sight

Transparent view on how investment in policy is translated into measured impacts in communities ensuring best value from every dollar spent on prevention.
